

4.1 HUE SIMILARITY

Relasjonslikhet

Kulørtoner. Sorter prøvene i tre grupper med ulike kulørtoner. Innen hver gruppe skal fargene være like i kulørtone, d.v.s. forholdet mellom de to inngående kulørte egenskapene (i dette tilfellet rødhet/blåhet) skal være konstant.

Monter prøvene gruppevis i rutene og marker kulørtonen med en strek i resp.

Fargesirkel. Marker også gjerne for hver enkelt farge plasseringen i fargetriangelen og fargesirkelen
