

4.2C CHROMATICNESS SIMILARITY

Gradlikhet

Kulørhet. Sorter prøvene i tre grupper med ulike grader av kulørhet (høy, middels og lav). Innen hver gruppe skal fargene være kulørhetslike.

Monter prøvene gruppevis i rutene og marker graden av kulørhet med en strek i resp. fargetriangel. Marker også gjerne hver enkelt farge plasseringen i fargetriangelen og fargesirkelen.
