

4.2W WHITENESS SIMILARITY

Gradlikhet

Hvithet. Sorter prøvene i tre grupper med ulike grader av hvithet (høy, middels og lav). Innen hver gruppe skal fargene være hvithetslike.

Monter prøvene gruppevis i rutene og marker graden av hvithet med en strek i resp. fargetriangel. Marker også gjerne hver enkelt farge plasseringen i fargetriangelen og fargesirkelen.
